Adjustable Cranial Orthoses for Positional Plagiocephaly and Craniosynostoses
Corporate Medical Policy

File Name: Adjustable Cranial Orthoses for Positional Plagiocephaly and Craniosynostoses File Code: 1.01.VT11
Origination: 11/2011
Last Review: 07/2021
Next Review: 07/2022
Effective Date: 08/01/2021

Description

Cranial orthoses involve an adjustable helmet or band that progressively molds the shape of the infant cranium by applying corrective forces to prominences while leaving room for growth in the adjacent flattened areas. A cranial orthotic device may be used to treat postsurgical synostosis or positional plagiocephaly in pediatric patients.

When a service may be considered medically necessary

The use of an adjustable cranial orthosis is considered medically necessary as part of the post-operative management of craniosynostosis.

The use of an adjustable cranial orthosis as a treatment of persistent plagiocephaly or brachycephaly without synostosis may be considered medically necessary when ALL of the following conditions have been met:

1. Patient is at least 3 months of age but not greater than 18 months of age; AND
2. Marked asymmetry has not been substantially improved following conservative therapy of at least 2 months duration with cranial repositioning therapy (with or without physical therapy). Note: Due to the mobility of children > 4 months of age, repositioning therapy is not effective and thus, a trial of repositioning is not indicated; AND

3. Asymmetry of the cranial base as documented by any of the following:

- The patient has a cephalic index that is at least two standard deviations above or below the mean for the appropriate gender and age; or

- Skull Base Asymmetry: At least 6 mm right/left discrepancy measured subnasally to the tip of the tragus (cartilaginous projection of the auricle at the front of the ear); or

- Cranial Vault Asymmetry: At least a 8 mm right/left discrepancy, measured from the frontozygomaticus point (identified by palpation of the suture line above the upper outer corner of the orbit) to the contralateral euryon, defined as the most lateral point on the head located in the parietal region; or

- Asymmetry of the orbitotragal distances, as documented by at least a 4 mm right/left asymmetry measured from the lateral aspect of orbit to tip of ipsilateral tragus.

The custom molded orthotic is designed to fit a child’s head for 2-4 months. A second helmet or band may be required if the asymmetry has not resolved or significantly improved after 2-4 months.

**When a service is considered investigational**

The use of an adjustable cranial orthosis is considered *investigational* for all other indications not outlined above.

**Document Precedence**

Blue Cross and Blue Shield of Vermont (BCBSVT) Medical Policies are developed to provide clinical guidance and are based on research of current medical literature and review of common medical practices in the treatment and diagnosis of disease. The applicable group/individual contract and member certificate language, or employer’s benefit plan if an ASO group, determines benefits that are in effect at the time of service. Since medical
practices and knowledge are constantly evolving, BCBSVT reserves the right to review and revise its medical policies periodically. To the extent that there may be any conflict between medical policy and contract/employer benefit plan language, the member’s contract/employer benefit plan language takes precedence.

Audit Information

BCBSVT reserves the right to conduct audits on any provider and/or facility to ensure compliance with the guidelines stated in the medical policy. If an audit identifies instances of non-compliance with this medical policy, BCBSVT reserves the right to recoup all non-compliant payments.

Administrative and Contractual Guidance

Benefit Determination Guidance

Prior approval is required and benefits are subject to all terms, limitations and conditions of the subscriber contract.

Incomplete authorization requests may result in a delay of decision pending submission of missing information. To be considered compete, see policy guidelines above.

NEHP/ABNE members may have different benefits for services listed in this policy. To confirm benefits, please contact the customer service department at the member’s health plan.

Federal Employee Program (FEP): Members may have different benefits that apply. For further information please contact FEP customer service or refer to the FEP Service Benefit Plan Brochure. It is important to verify the member’s benefits prior to providing the service to determine if benefits are available or if there is a specific exclusion in the member’s benefit.

Coverage varies according to the member’s group or individual contract. Not all groups are required to follow the Vermont legislative mandates. Member Contract language takes precedence over medical policy when there is a conflict.

If the member receives benefits through an Administrative Services Only (ASO) group, benefits may vary or not apply. To verify benefit information, please refer to the member’s employer benefit plan documents or contact the customer service department. Language in the employer benefit plan documents takes precedence over medical policy when there is a conflict.

Policy Implementation/Update information

Page 3 of 5
Medical Policy Number: 1.01.VT11
02/2014  ICD-10 remediation only. RLJ
08/2015  No language updates. No coding changes. RLG
06/2017  Minor grammar changes. Policy statement remains unchanged. Updated references.
09/2018  Reviewed and updated references no changes to policy statements.
08/2020  Policy statement changed to include medical necessity for brachycephaly without synostosis. Introduction and references simplified.
07/2021  Policy statement expanded to include cephalic index. References updated.

**Eligible Providers**

Qualified healthcare professionals practicing within the scope of their license(s).

**Approved by BCBSVT Medical Directors**

Joshua Plavin, MD, MPH, MBA
Chief Medical Officer

Kate McIntosh, MD, MBA, FAAP
