External Insulin Pumps
Corporate Medical Policy

Description/Summary

An external insulin infusion pump is a programmable, battery-powered mechanical syringe/reservoir device controlled by a microcomputer to deliver a continuous subcutaneous insulin infusion (CSII) into the body. Typical devices have a two-to-three-day supply of insulin connected to an infusion set attached to a small needle or cannula programmed to deliver a steady basal amount of insulin and release a bolus dose at meals and at programmed intervals. The purpose of the insulin pump is to provide an accurate, continuous, controlled delivery of insulin which can be regulated by the user to achieve intensive glucose control objectives and to prevent the metabolic complications of hypoglycemia, hyperglycemia and diabetic ketoacidosis. Other more recently developed devices are not battery powered and rely on mechanical instillation of programmed basal and bolus insulin. This document addresses the medically necessary uses of these devices.

Policy

Coding Information

Attachment I- HCPCS code table & instructions

See the BCBSVT prior approval list for medical equipment to determine prior approval requirements for external insulin pumps.

When a service may be considered medically necessary

External insulin pumps may be considered medically necessary in the treatment of diabetic patients based on the following criteria.

All members must meet ALL of the following general criteria:
• Completion of a diabetes self-management education program; **AND**
• Treatment program including at least three insulin injections per day with frequent self-adjustments of insulin dose; **AND**
• Documented frequent blood glucose self-testing, averaging at least three times per day prior to initiation of the insulin pump; **AND**
• Have been evaluated either by a pediatric endocrinologist or endocrinologist who supports that the member is capable of using a pump or hybrid closed loop system and that treatment is in the best interest of the member.

External insulin pumps may be considered **medically necessary** for members who have a history of pancreatectomy (partial or complete/total.)

Use of a US Food and Drug Administration–approved automated insulin delivery system artificial pancreas device system designated as hybrid closed loop insulin delivery system (with low glucose suspend and suspend before low features) may be considered **medically necessary** in patients with type 1 diabetes who meet all of the following criteria:

- Age 2 and older; **AND**
- Glycated Hemoglobin level lower than 10.0%; **AND**
- Who meet all the general criteria listed above.

Supplies required for the proper use of a medically necessary external insulin pump, including custom-designed batteries and power supplies, are considered **medically necessary**. However, off-the-shelf batteries that can also be used to power non-medical equipment are considered convenience items and therefore a benefit exclusion.

**Enhanced Features**

An external insulin pump with enhanced features may be considered **medically necessary** when the criteria for a standard external insulin pump are met and there is a documented special need, such as a vision* or hearing impairment*, that requires an additional or enhanced feature for successful use of an insulin pump.

*legally blind or deaf

**Replacement of External Insulin Pump or System Component**

The replacement of an existing external insulin pump, or an insulin pump system component required for the delivery of insulin, may be considered **medically necessary** for an individual with successfully managed type 1 or type 2 diabetes mellitus when BOTH of the following criteria are met:

1. The pump/component is malfunctioning and cannot be repaired **AND** is no longer under warranty
2. Healthcare provider is actively managing insulin pump therapy and provider documentation supports the need for a replacement device. When requesting a new pump due to a malfunction, documentation containing a complete description of the specific malfunction is required.

Replacement of lost, stolen or destroyed Durable Medical Equipment

We will replace one lost, stolen or destroyed Durable Medical Equipment, prosthetic or orthotic per Plan Year if not covered by an alternative entity (including but not limited to homeowners insurance and automobile insurance) if:

- the Durable Medical Equipment, prosthetic or orthotic’s absence would put the member at risk of death, disability or significant negative health consequences such as a hospital admission.
- the Durable Medical Equipment is still under warranty.

NOTE: In order to replace a stolen item we require you to submit documentation, such as a police report, with the request.

Exclusions

We do not cover the replacement of a lost, stolen or destroyed Durable Medical Equipment, prosthetic or orthotic:

- if the criteria above have not been met; AND
- for more than one lost, stolen or destroyed Durable Medical Equipment, prosthetic or orthotic per Plan Year.

When a service is considered investigational

Bihormonal, completely automated systems which use two commercially available pumps, one of which delivers insulin and the other glucagon are considered investigational

Do-it-yourself artificial pancreas systems (DIY APS) are not FDA approved and are considered investigational

When a service is considered non-covered (benefit exclusion)

However, off-the-shelf batteries that can also be used to power non-medical equipment are considered convenience items and therefore a benefit exclusion.

Replacement of a functioning insulin pump, or additional software/hardware for the sole purpose of upgrading to the latest technology is considered a convenience and is therefore a benefit exclusion.

Deluxe features/items, add-ons, or upgrades that do not significantly enhance the functionality of the insulin pump or are for the ease of member/caregiver use is considered a convenience and is therefore a benefit exclusion.

Any treatment, Durable Medical Equipment, supplies or accessories intended principally
for participation in sports or recreational activities or for personal comfort or convenience.

When an external insulin pump does not provide a therapeutic benefit to a patient in need because of certain medical conditions or illnesses.

Document Precedence

Blue Cross and Blue Shield of Vermont (BCBSVT) Medical Policies are developed to provide clinical guidance and are based on research of current medical literature and review of common medical practices in the treatment and diagnosis of disease. The applicable group/individual contract and member certificate language, or employer’s benefit plan if an ASO group, determines benefits that are in effect at the time of service. Since medical practices and knowledge are constantly evolving, BCBSVT reserves the right to review and revise its medical policies periodically. To the extent that there may be any conflict between medical policy and contract/employer benefit plan language, the member’s contract/employer benefit plan language takes precedence.

Audit Information

BCBSVT reserves the right to conduct audits on any provider and/or facility to ensure compliance with the guidelines stated in the medical policy. If an audit identifies instances of non-compliance with this medical policy, BCBSVT reserves the right to recoup all non-compliant payments.

Administrative and Contractual Guidance

Benefit Determination Guidance

Prior approval may be required and benefits are subject to all terms, limitations and conditions of the subscriber contract.
Incomplete authorization requests may result in a delay of decision pending submission of missing information. To be considered compete, see policy guidelines above. NEHP/ABNE members may have different benefits for services listed in this policy. To confirm benefits, please contact the customer service department at the member’s health plan.

Federal Employee Program (FEP): Members may have different benefits that apply. For further information please contact FEP customer service or refer to the FEP Service Benefit Plan Brochure. It is important to verify the member’s benefits prior to providing the service to determine if benefits are available or if there is a specific exclusion in the member’s benefit.

Coverage varies according to the member’s group or individual contract. Not all groups are required to follow the Vermont legislative mandates. Member Contract language takes precedence over medical policy when there is a conflict.

If the member receives benefits through an Administrative Services Only (ASO) group, benefits may vary or not apply. To verify benefit information, please refer to the member’s employer benefit plan documents or contact the customer service department. Language in the employer benefit plan documents takes precedence over medical policy when there is a conflict.
