Nutritional Counseling
Corporate Medical Policy

Description/Summary

Nutritional counseling is individualized advice and guidance given to members at nutritional risk due to nutritional history, current dietary intake, medication use or chronic illness, about options and methods for improving nutritional status. A certified, registered, or licensed healthcare professional functioning within the scope of his or her license provides this counseling.

Nutritional counseling is often required for members with conditions such as diabetes, heart disease, kidney disease, obesity, eating disorders, or other nutrition related conditions.

Nutritional counseling begins with assessing the person’s overall nutritional status, followed by an individualized prescription for treatment. The dietitian or health professional takes into account a person’s food intake, physical activity, course of any medical therapy including medications and other treatments, individual preferences, and other factors.

Nutritional counseling of individuals with eating disorders as part of a multidisciplinary approach to treatment, is supported by the American Psychological Association, the Academy for Eating Disorders, and the American Academy of Pediatrics.

A multidisciplinary, coordinated approach to treatment includes a medical clinician, mental health clinician and dietician/nutritionist who, preferably, all have specialized knowledge and training in eating disorders.

Unique to the Registered Dietitian (RD) is the qualification to provide Medical Nutrition Therapy (MNT). MNT is an essential component of comprehensive nutrition care. Disease or conditions may be prevented, delayed, or managed, and quality of life improved in individuals receiving MNT. During MNT intervention, RDs counsel individuals on behavioral
and lifestyle changes that impact long-term eating habits and health. MNT is an evidenced-based application of the Nutrition Care Process including:

1. Performing a comprehensive nutrition assessment
2. Determining the nutrition diagnosis
3. Planning and implementing a nutrition intervention using evidence-based nutrition practice guidelines
4. Monitoring and evaluating an individual’s progress toward goals Nutrition Therapy (MNT)

**Coding Information**

Click the links below for attachments, coding tables & instructions.

*Attachment I- Procedural Coding Table & Instructions*
*Attachment II- ICD-10-CM Code Table*

**Policy Guidelines**

When a service may be considered medically necessary

There is no limit on the number of visits for nutritional counseling for treatment of diabetes.

For all other nutritional counseling, three outpatient nutritional counseling visits are covered each plan year.

With prior approval, benefits may be provided for up to 20 additional nutritional counseling visits for the treatment of eating disorders and inherited metabolic diseases.

Note: Refer to BCBSVT Corporate Medical Policy: Medical Food for Inherited Metabolic Disease (IMD) for a list of applicable diagnoses

Members with diagnoses of metabolic disease or eating disorders must provide medical information supporting the need for outpatient nutritional counseling beyond the initial three visits.

**Documentation Required**

Prior approval requests for all eating disorders, specified and unspecified, must include a clinical summary with a dietary assessment with any of the following information that is applicable:

- Frequency of nutrition counseling follow up appointments
- Percent of meal plan compliance
- Weight chart with a goal weight range
- Frequency of:
- Binges
- Purges
- Laxative misuse
- Number of meals skipped
- Number of minutes exercised
- Transition to/or from a higher level of care
- Percentage of day spent in food related thoughts
- Physical health
- Nutrition related abnormalities
- Flexibility in food selection and inclusion of fear foods

Prior approval requests for metabolic disorders must include a clinical summary with a dietary assessment with any of the following information that is applicable:

- Frequency of nutrition counseling follow up appointments
- Treatment plan with goals

The nutrition professional must be in close communication with the primary care provider and therapist as non-food-related issues arise so they can be referred to the appropriate member of the treatment team.

When a service may be considered a benefit exclusion

Any nutritional counseling visits over three per year that do not meet the above criteria and diagnoses.

Background

Definitions

Metabolic diseases are typically hereditary diseases or disorders that disrupt normal metabolism, the process of converting food to energy on a cellular level. Thousands of enzymes participating in numerous interdependent metabolic pathways carry out this process. Metabolic diseases affect the ability of the cell to perform critical biochemical reactions that involve the processing or transport of proteins (amino acids), carbohydrates (sugars and starches), or lipids (fatty acids).

Eating disorders are characterized by a persistent disturbance of eating that impairs health or psychosocial functioning. The disorders include anorexia nervosa, avoidant/restrictive food intake disorder, binge eating disorder, bulimia nervosa, pica, and rumination disorder.

Eating disorders exist on a continuum of severity and various stages of remission and the DSM-5 diagnostic criteria define levels of severity and levels of remission for anorexia nervosa, bulimia nervosa, and binge-eating disorder.
Anorexia Nervosa

Anorexia nervosa is characterized by dietary restriction that causes an abnormally low body weight and can be life threatening and require hospitalization in severe cases.

**Symptoms Include:**

- Restriction of energy intake that leads to a low body weight, given the patient’s age, sex, developmental trajectory, and physical health
- Intense fear of gaining weight or becoming fat, or persistent behavior that prevents weight gain, despite being underweight
- Distorted perception of body weight and shape, undue influence of weight and shape on self-worth, or denial of the medical seriousness of one’s low body weight

Bulimia Nervosa

Bulimia nervosa is characterized by a cycle of bingeing and compensatory behaviors such as self-induced vomiting designed to undo or compensate for the effects of binge eating. Bulimia nervosa can be harmful to multiple body systems.

**Symptoms Include**

- Episodes of binge eating, defined as consuming an amount of food in a discrete period of time that is definitely larger than what most people would eat in a similar amount of time under similar circumstances.
- A sense of lack of control overeating during the episode
- Recurrent inappropriate compensatory behavior to prevent weight gain
- Self-evaluation is unduly influenced by body shape and weight

Binge Eating Disorder

Binge Eating Disorder (BED) is a type of eating disorder that is characterized by recurrent binge eating without the regular use of compensatory measures to counter the binge eating.

**Symptoms Include**

- Episodes of binge eating, defined as consuming an amount of food in a discrete period of time that is definitely larger than what most people would eat in a similar amount of time under similar circumstances.
- A sense of lack of control overeating during the episode
• No regular use of inappropriate compensatory behaviors (e.g., purging, fasting, or excessive exercise) as are seen in bulimia nervosa.

Other Specified Feeding or Eating Disorder

Formerly described at Eating Disorders Not Otherwise Specified (EDNOS) in the DSM-IV, Other Specified Feeding or Eating Disorder (OSFED), is a feeding or eating disorder that causes significant distress or impairment, and behaviors do not meet full criteria for any of the other feeding and eating disorders, but still cause clinically significant problems. The commonality in all of these conditions is the serious emotional and psychological suffering and/or serious problems in areas of work, school or relationships. Significant clinical impact on daily health and functioning must be clearly documented for purposes of medical necessity.

Avoidant/Restrictive Food Intake Disorder

• Failure to consume adequate amounts of food, with serious nutritional consequences, but without the psychological features of Anorexia Nervosa
• Reasons for the avoidance of food include fear of vomiting or dislike of the textures of the food

Pica

• The persistent eating of non-food items when it is not a part of cultural or social norms

Rumination Disorder

• Regurgitation of food that has already been swallowed. The regurgitated food is often re-swallowed or spit out

Related Policies

Medical Food for Inherited Metabolic Disease (IMD)

Document Precedence

Blue Cross and Blue Shield of Vermont (BCBSVT) Medical Policies are developed to provide clinical guidance and are based on research of current medical literature and review of common medical practices in the treatment and diagnosis of disease. The applicable group/individual contract and member certificate language, or employer’s benefit plan if an ASO group, determines benefits that are in effect at the time of service. Since medical practices and knowledge are constantly evolving, BCBSVT reserves the right to review and revise its medical policies periodically. To the extent that there may be any conflict between medical policy and contract/employer benefit plan language, the member’s contract/employer benefit plan language takes precedence.

Audit Information

BCBSVT reserves the right to conduct audits on any provider and/or facility to ensure compliance with the guidelines stated in the medical policy. If an audit identifies instances of non-compliance with this medical policy, BCBSVT reserves the right to recoup all non-compliant payments.

Administrative and Contractual Guidance

Benefit Determination Guidance

Prior approval benefits may be provided for up to twenty (20) additional nutritional counseling visits for the treatment of eating disorders and inherited metabolic diseases (please refer to the medical policy for Medical Food for Inherited Metabolic Disease (IMD) for a list of applicable diagnoses).

Benefits are subject to all terms, limitations and conditions of the subscriber contract.
Incomplete authorization requests may result in a delay of decision pending submission of missing information. To be considered complete, see policy guidelines above.

NEHP/ABNE members may have different benefits for services listed in this policy. To confirm benefits, please contact the customer service department at the member’s health plan.

Federal Employee Program (FEP): Members may have different benefits that apply. For further information please contact FEP customer service or refer to the FEP Service Benefit Plan Brochure. It is important to verify the member’s benefits prior to providing the service to determine if benefits are available or if there is a specific exclusion in the member’s benefit.

Coverage varies according to the member’s group or individual contract. Not all groups are required to follow the Vermont legislative mandates. Member Contract language takes precedence over medical policy when there is a conflict.

If the member receives benefits through an Administrative Services Only (ASO) group, benefits may vary or not apply. To verify benefit information, please refer to the member’s employer benefit plan documents or contact the customer service department. Language in the employer benefit plan documents takes precedence over medical policy when there is a conflict.
