Description/Summary

Definitions:

Durable Medical Equipment (DME): Equipment that requires a prescription from your Provider:

- is primarily and customarily used for a medical purpose;
- is appropriate for use in the home;
- is designed for prolonged and repeated use; and
- is not generally useful to a person that is not ill or injured.

DME includes hospital-type beds as defined below:

Semi-electric hospital bed: Manual height adjustment with electric head and leg elevation adjustments.

Total electric hospital bed: Electric height adjustment with electric head and leg elevation adjustments. Available in heavy-duty and extra heavy-duty, based on weight.

Air Fluidized Bed: An air fluidized bed is a device employing the circulation of filtered air through ceramic spherules (small, round ceramic objects) that is marketed to treat or prevent bedsores or to treat extensive burns. An air fluidized bed uses warm air under pressure to set small ceramic beads in motion, which simulate a fluid movement. When the patient is placed in the bed, his/her body weight is evenly distributed over a large surface area, which creates a sensation of floating.
Policy

Coding Information

Attachment I - HCPCS Coding Table & Instructions

The Plan provides benefits for the rental, rental to purchase or purchase of hospital beds when criteria outlined in this policy is met.

When a service may be considered medically necessary

A fixed-height hospital bed may be considered medically necessary when:

- the member’s condition requires positioning of the body; e.g., to alleviate pain, promote good body alignment, prevent contractures, avoid respiratory infections, in ways not feasible in an ordinary bed; OR
- the member requires the head of the bed to be elevated more than 30 degrees most of the time due to congestive heart failure, chronic pulmonary disease, or problems with aspiration. Pillows or wedges must have been considered; OR
- the member’s condition requires special attachments (e.g. traction equipment) that cannot be fixed on and used on an ordinary bed.

A variable-height bed may be medically necessary when criteria are met for a fixed-height bed and the member requires a bed height other than that of a fixed-height hospital bed to permit transfers to a chair, wheelchair or standing position.

A semi-electric bed may be medically necessary when criteria are met for a fixed-height hospital bed and the member requires frequent changes in body position, and/or has an immediate need for a change in body position and is able to operate the controls for adjustment.

A total electric bed may be medically necessary when criteria are met for a fixed-height hospital bed; AND

- the member requires frequent changes in body position and/or has an immediate need for a change in body position; OR
- the member has a condition that requires a variable height feature. Such conditions may include brain injury, spinal cord injury, severe arthritis or orthopedic conditions or severe cardiac conditions, among other severely debilitating diseases/conditions where the member requires a bed height other than a fixed-height hospital bed to permit transfers to a chair, wheelchair or standing position.

A heavy-duty, extra-wide/bariatric bed may be medically necessary when criteria are met for a fixed-height bed and the member’s weight is more than 350 pounds but less than 600 pounds.

An extra-heavy-duty bed may be medically necessary when criteria are met for a
fixed-height hospital bed and the member weighs 600 pounds or more.

The Plan covers a pediatric hospital bed/crib as medically necessary when the child meets criteria for any of the above hospital beds.

Use of the air fluidized bed is considered medically necessary when ALL of the following conditions are met in patients who:

- are bedridden or chair bound as a result of limited mobility; AND
- have a stage 3 (full-thickness tissue loss) or stage 4 (deep tissue destruction) pressure sore; AND
- have exhausted conservative treatment without improvement; AND
  - in the absence of an air fluidized bed, the patient would require institutionalization; AND
- have a trained adult caregiver available to assist the patient with activities of daily living, fluid balance, dry skin care, repositioning, recognition and management of altered mental status, dietary needs, prescribed treatments, and management and support of the air fluidized bed system and its problems such as leakage; AND
- have a physician who directs the home treatment regimen, and reevaluates and recertifies the need for the air fluidized bed on a monthly basis; AND
- have utilized and ruled out all other alternative equipment. Such alternatives include, but are not limited to, gel flotation pads, egg crate mattresses, and pressure pads and pumps.

Repairs, maintenance, and replacement of eligible Durable Medical Equipment (DME) are considered medically necessary when it is necessary to make the equipment usable. The Plan reserves the right to determine whether rental or rental to purchase or purchase of the equipment is more cost-effective and/or appropriate. The total rental benefits may not exceed our allowed amount for the purchase of equipment.

When a service is considered not medically necessary

The Plan does not cover any of the following beds, as they are not considered to be appropriate for use in the home care setting and therefore not medically necessary:

- Institutional beds
- Kinetic therapy beds
- Stryker frame beds

Oscillating beds or other similar beds in the home care setting are considered not medically necessary. For example, some institutional type and specialty beds deliver therapies that are known as kinetic therapy and continuous lateral rotational therapy. The CDC (Centers for Disease Control and Prevention) defines kinetic therapy as 40-degree rotation or greater to each side using a specialty bed, and continuous lateral rotational therapy as delivering less than 40-degree rotation to each side, also using a specialty bed. These types of beds are used to facilitate drainage of pulmonary secretions and to relieve pressure. They are often
used for patients with spinal cord injuries or impaired respiratory function in an acute care hospital setting. Many clinical studies have been conducted to research the clinical benefits of various degrees of rotation, but all these studies have been conducted in acute care settings. Home use of the air fluidized bed is not medically necessary under any of the following circumstances:

- the patient requires treatment with wet soaks or has moist wound dressings that are not protected with an impervious covering such as plastic wrap;
- the caregiver is unable to provide the type of care required by the patient on an air fluidized bed;
- structural support is inadequate to support the weight of the air fluidized system (it weighs 1600 pounds or more);
- the home electrical system is insufficient for the anticipated increase in energy consumption.

New technology introducing improved features for existing medical equipment. Benefits are considered not medically necessary for “deluxe” features to make the equipment more versatile or easier for the member to use if the standard/conventional equipment meets the member’s functional needs.

When a service is considered non-covered (benefit exclusion)

- Personal service, comfort or convenience items. This includes items, add-ons or upgrades that are intended primarily for member/caregiver convenience.
- When a hospital bed does not provide a therapeutic benefit to a patient in need because of certain medical conditions or illnesses.

The Plan does not cover any of the following beds and accessories, as they are not primarily medical in nature and are therefore non-covered (benefit exclusion):

- All nonhospital adjustable beds (e.g., Craftmatic Adjustable Bed, Simmons Beautyrest Adjustable Bed, Adjust-A-Sleep Adjustable Bed);
- Bed boards;
- Bed elevators (e.g., blocks, lifters);
- Bed wedges/pillows;
- Bedrail pads;
- Custom bedroom equipment;
- Mattresses (e.g., inner spring, foam rubber, viscoelastic or memory foam mattresses [e.g., Tempur-Pedic], adjustable firmness/support mattresses [e.g., Select Comfort]);
- Over bed tables, trays, lap boards;
- Power/manual lounge beds;
- Safety accessories, such as enclosures/canopies (e.g., Vail Enclosed Bed Systems, Posey Bed Canopy beds); Synthetic or lambswool sheepskin pad, any size;
- Waterbeds
Policy Guidelines

The following information is required when requesting prior approval for a hospital bed:

- A detailed clinical summary from a physician including, but not limited to, the member’s diagnosis, summary of hospital stay if applicable, prognosis, and description of disabilities requiring the functions of a hospital bed.
- Anticipated length of time bed will be needed.
- HCPCS code, and monthly rental and purchase price.

For air fluidized beds, clinical information must be submitted monthly to determine medical necessity for ongoing use.

Related Policies

Medical Equipment and supplies/Durable Medical Equipment (DME) and supplies

Document Precedence

Blue Cross and Blue Shield of Vermont (BCBSVT) Medical Policies are developed to provide clinical guidance and are based on research of current medical literature and review of common medical practices in the treatment and diagnosis of disease. The applicable group/individual contract and member certificate language determines benefits that are in effect at the time of service. Since medical practices and knowledge are constantly evolving, BCBSVT reserves the right to review and revise its medical policies periodically. To the extent that there may be any conflict between medical policy and contract language, the member’s contract language takes precedence.

Audit Information

BCBSVT reserves the right to conduct audits on any provider and/or facility to ensure compliance with the guidelines stated in the medical policy. If an audit identifies instances of non-compliance with this medical policy, BCBSVT reserves the right to recoup all non-compliant payments.

Administrative and Contractual Guidance

Benefit Determination Guidance
Prior approval is required and benefits are subject to all terms, limitations and conditions of the subscriber contract.

Incomplete authorization requests may result in a delay of decision pending submission of missing information. To be considered compete, see policy guidelines above.

NEHP/ABNE members may have different benefits for services listed in this policy. To confirm benefits, please contact the customer service department at the member’s health plan.

Federal Employee Program (FEP): Members may have different benefits that apply. For further information please contact FEP customer service or refer to the FEP Service Benefit Plan Brochure. It is important to verify the member’s benefits prior to providing the service to determine if benefits are available or if there is a specific exclusion in the member’s benefit.

Coverage varies according to the member’s group or individual contract. Not all groups are required to follow the Vermont legislative mandates. Member Contract language takes precedence over medical policy when there is a conflict.

If the member receives benefits through an Administrative Services Only (ASO) group, benefits may vary or not apply. To verify benefit information, please refer to the member’s employer benefit plan documents or contact the customer service department. Language in the employer benefit plan documents takes precedence over medical policy when there is a conflict.
